

INPUT · EMBER electricity-generation data · 9 carriers × N years per country

Closure → Centred log-ratio → Helmert-orthonormal ILR → Aitchison-distance trajectory

**1. Composition
timeline**

WHAT carriers
are big

2. Helmsman

WHO is at
the wheel

**3. Helmsman
trajectory**

WHEN the wheel
changes hands

**4. Power
Share**

HOW MUCH each
carrier did

**5. Activation
Coefficient**

WHY a small
carrier mattered

Combined into one observable stack — the falsifiable claim

**WHAT path
the system took**

(size + trajectory)

**WHY the path
took that shape**

(Activation Coefficient)

**WHERE the hidden
drivers are**

(Power Share concentration)

Five viewpoints · one observable stack · WHAT and WHY together
